

## WinSPC Hosted Solutions

### About DataNet

DataNet Quality Systems empowers manufacturers to improve products, processes, and profitability through real-time statistical software solutions. The company's vision is to deliver trusted and capable technology solutions that allow manufacturers to create the highest quality product for the lowest possible cost.

### Harness the Power of the Cloud

#### WinSPC Hosted Solutions Overview

DataNet now offers hosted solutions that allow customers to experience the benefits of a centralized available-anywhere WinSPC experience without any of the complexities of procuring and managing their own hardware and software infrastructure. DataNet has partnered with Amazon Web Services to reliably deliver WinSPC sessions at an affordable cost by utilizing one or more of the world class datacenters and systems that power services from companies like Amazon, Twitter, Netflix, Pinterest, and SAP. This allows DataNet to focus on providing the services that add value for you and for you to focus on your production outcomes.

With DataNet's hosted solutions, hardware maintenance, operating system patches, database and WinSPC upgrades are all handled automatically and logged. Backups and database replicas are maintained, monitored, logged and guaranteed. Your systems remain accessible from only your locations or from anywhere in the world. System backup, snapshot and downtime windows become simply a matter of scheduling. DataNet's hosted solutions permit hardware and licensing to be completely managed while remaining flexible to meet your changing needs.

DataNet knows that each company has its unique requirements and expectations for performance. DataNet's hosted solutions can accommodate a wide range of differing requirements. Solutions can be tailored to suit the needs of the individual customer, providing from 1 to 88 cores per tier in order to get just the right cost-to-performance balance for each customer. Likewise databases can scale invisibly from 20GB to 1TB per instance for Microsoft and up to 3TB per instance for Oracle.

Whether your goal is to reliably replicate what you have done before, consolidate supplier, vendor or distant data collection, or migrate your existing systems to an automated and managed environment, DataNet's team of engineers can help you to understand your options and define the most cost efficient and effective path for you to you attain your goals.
